# WOVEN VINYL FLOORING

## PVC Woven Floor Mat

Woven vinyl floor mat will cover your flooring needs for good! It is the best alternative to traditional carpets, wooden and marble floors, because it offers so much more.

Woven vinyl flooring is a unique combination of beauty and technology with unsurpassed environmental durability

The innovative vinyl woven material designed to make you feel comfortable. All excess material created during production can be recycled.

**WOVEN VINYL FLOOR COVERINGS** combine the remarkable durability of vinyl with the aesthetic appeal and texture of traditional carpeting.

## FLOORS FOR YOUR COMFORTABILITY

### ANTISTATIC PROPERTIES

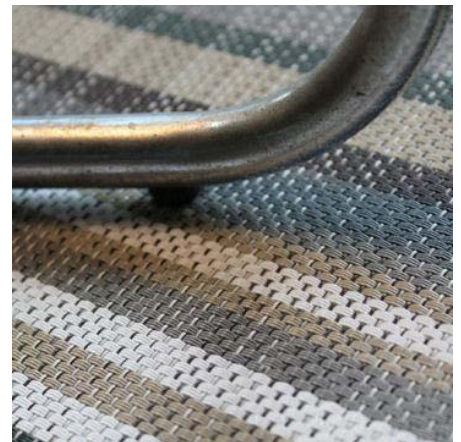

Formulated to minimize static electricity generated from walking on most carpeting, Woven Vinyl flooring Solutions provide effective protection against unpleasant shocks

### QUALITY THERMAL INSULATION

Good quality thermal insulation can dramatically improve the comfort of a room. Unlike hard flooring, Woven Vinyl flooring offers warmth for greater well-being and energy savings

### NON-SLIP SURFACE

The woven structure naturally prevents slipping, making it particularly appropriate for public buildings where safety standards often determine the materials decorators can use.

## **Fireproof**

Woven Vinyl flooring has excellent flame resistance. Our products have been successfully tested and certified in accordance with fire safety standard.

## **Waterproof**

Moisture is not a problem for Woven Vinyl flooring. It is waterproof, rotproof and ultra-stable. It is perfectly suitable for kitchens, bathrooms, etc.

## **Fadeless**

It is available in a wide range of colours. Moreover it is solution dyed, meaning that the colour is created in the solution before the fibers are extruded. This provides the ultimate long lasting colour and unsurpassed colour life against fading.

## **LOW MAINTENANCE**

Cleaning time is minimal. Basic cleaning can be done with a vacuum, broom and warm water mixed with a neutral detergent

## **STAIN RESISTANT**

Woven Vinyl flooring was designed to resist stains by not absorbing liquids and thus making spills quick and easy to clean.

## **Durable/Strong**

Its durability makes it a good choice for high traffic hotels, apartments, commercial and also residential application

## **Textured/Soft**

It feels like real textile and provides a soft and comfortable feeling.

## Unique

It can be used indoors or outdoors according to your desires.

## Quiet

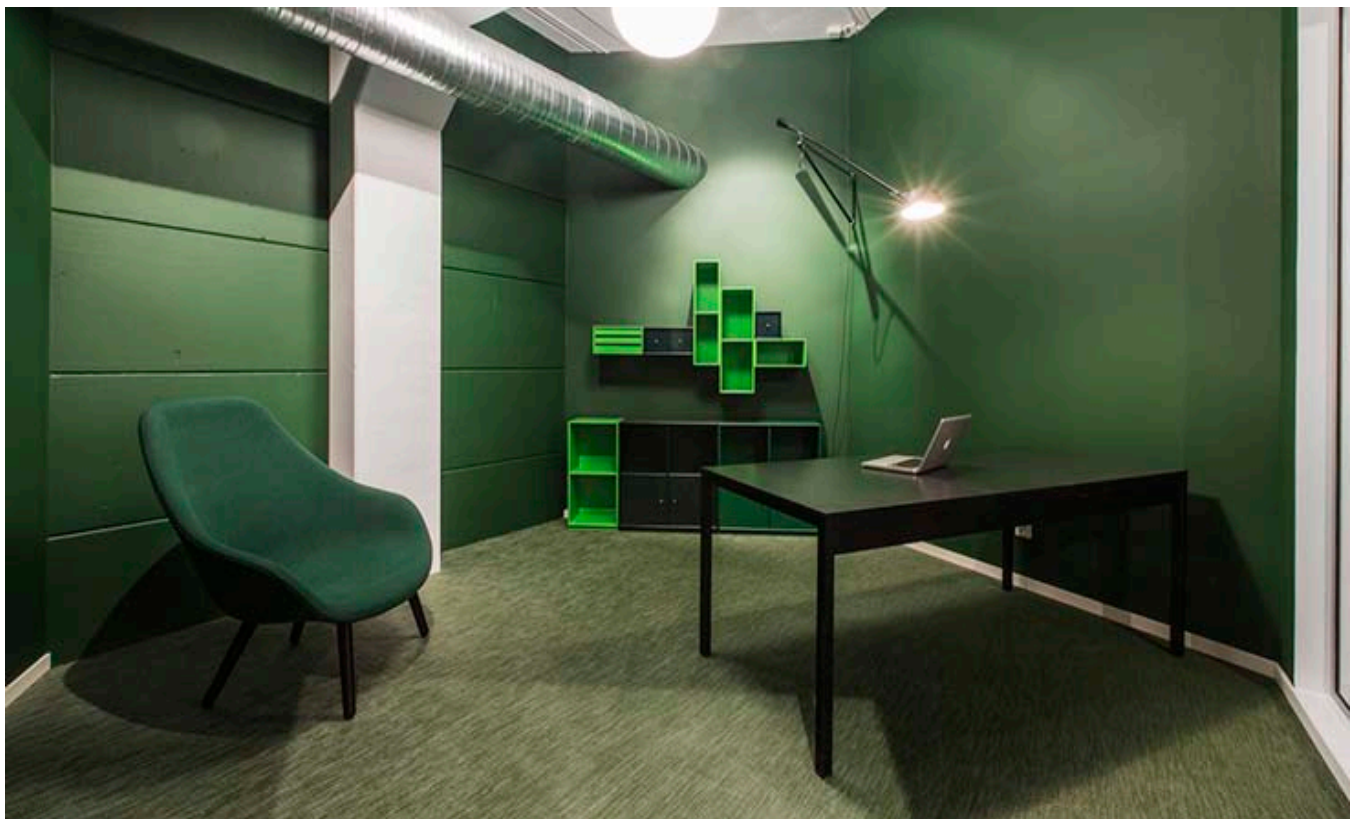

It is sound absorbing so you will enjoy the sound of silence at work or rest.

## Safe

It is flame resistant and it has much better anti-slip properties than a wooden or marble floor. It can be used unbacked where appropriate or backed for strength and better anti-slip characteristics, or treated for special applications. The backings can be used to create more durable, flame resistant fabrics with different degrees of breathability. The vinyl's DNA is antibacterial.

## Green

The innovative vinyl floor material designed to make you feel comfortable. The total production process uses low temperatures and nearly zeros water. All excess material created during production can be recycled.

## TREATMENT of SEAMS – COLD WELDING

To guarantee long-lasting, waterproof seams, each one must be chemically sealed using a product such as Werner Muller Type A or the equivalent.

Chemically sealing the seams will render them:

- 1) Permanently waterproof, thus avoiding any dust or moisture infiltration from cleaning.
  - The subflooring and the glue will be protected and therefore maintain their original adherence and resistance capabilities.
  - Irreversible creasing will also be avoided.
- 2) Permanently resistant to mechanical aggressions, hence avoiding the phenomena of seams eventually opening or edges coming loose due to traffic.

In certain countries, the regulations actually require treatment of seams, depending on the type of venue, its classification and the amount of the traffic. Check the local legislation for details.

1. 12 hours after installing the flooring strips, remove all residue from the glue and position the masking tape centred along the centre of the seam.

2. Cut the masking tape with cutter along the double cut edge.

3. Shake the tube of **cold welding (liquid sealer)** for PVC and press the needle deep into seam. Then drag the needle along while continuing to squeeze the tube to maintain an even distribution of the liquid sealer from end to end. Wait 30 minutes before using the room.
